YOUR BRAND, OUR RESPONSIBILITY

SUSTAINABILITY

Sustainability is a major factor in today's business decisions, and more organisations are choosing suppliers who can show how their waste is handled. We prioritise reuse and recycling for the materials we collect, so your confidential paper, IT equipment and branded textiles are kept out of general waste wherever possible. After each collection we can share a record of what was collected and how it was processed, to support your own sustainability and ESG reporting. We keep reviewing our processes to improve the environmental outcome for you and for us.

YOUR BRAND, OUR RESPONSIBILITY

SECURITY

We take security seriously and keep improving our systems and processes, so your materials are handled securely from collection to destruction.

Every collection is booked and logged. Materials are collected from your premises in sealed sacks or locked consoles and stay secure while in transit to destruction.

When we collect confidential or branded items, they are removed from the units and the sacks are sealed, so the materials remain secure. Once destruction is complete, you receive documentation for your records.

COMPLETE PROTECTION

Ensuring best practices for secure information destruction.

Our consultation is a simple way to review your confidential and end-of-life disposal needs in detail. We work with organisations of all sizes across many sectors and give practical, tailored advice. We will work with you to set up a secure process for disposing of documents, devices and branded items, helping to prevent identity theft and physical data breaches.

Convenience

We know that to make changes in any organisation, you need every colleague to buy-in. We ensure our services are simple to follow and convenient for all.

Control

We make secure destruction simple for organisations, so individuals do not have to decide what is confidential. A standard process gives you more control over brand protection and GDPR compliance.

Compliance

Convenience and control give you peace of mind. A consistent, documented process supports your compliance with data protection rules.

CIRCULAR

REUSE AND RECYCLING
PRIORITISED

We specialise in the secure shredding and destruction of textiles, uniform, workwear and PPE through our uniform and PPE disposal service. It is designed to safeguard your branded materials and intellectual property while minimising environmental impact.

Clients, government and consumers increasingly expect businesses to show how they handle end-of-life uniform. Choosing a secure, documented disposal service helps you do that.

After destruction we prioritise repurposing and recycling, and our collection records can support your sustainability, ESG and Scope 3 reporting.

Branded workwear and uniform can easily find their way into the public domain. A secure solution helps protect against potential breaches and impersonation attempts.

UNIFORM & PPE DISPOSAL PROCESS

CONFIDENTIAL DOCUMENTS

Our confidential shredding includes:

- One-off and scheduled collections
- Secure consoles and sealed sacks
- Off-site secure shredding
- Regular collections for disposal of confidential documents
- Fully auditable destruction records
- Support for your GDPR duties

Incorrectly disposing of documents containing employee information, passwords and login credentials, medical records or any sensitive or proprietary information unique to an organisation can easily cause a breach. We specialise in confidential document destruction, helping to protect against data breaches, fines and identity theft. We provide secure shredding and recycling across the UK.

Our customer-focused process gives you a clear record of every collection and an electronic note of secure destruction for your files.

TECHNOLOGY AND DATA...

Our IT and data destruction service provides secure media destruction and the recycling of a range of IT equipment, hardware, storage and other devices.

Devices accepted for destruction & recycling:

- PCs and laptops
- Hard drives, disks, DVDs, and CDs
- Laser and Inkjet printers
- Servers and photocopiers
- Network switches, hubs, routers and firewalls
- Mobile devices and phones

Regardless of your industry, the data held on IT systems needs careful handling. Our team works with you to understand your equipment and recommend the right WEEE destruction and recycling approach.

Through our IT and data destruction service, we arrange the collection and destruction of end-of-life and confidential WEEE, IT and secure media, giving businesses a secure and environmentally responsible option.

After destruction and recycling, we provide an audit trail and destruction documentation to support your GDPR obligations.

GDPR & DATA PROTECTION

The UK General Data Protection Regulation (UK GDPR) and the Data Protection Act 2018 set strict rules for organisations handling personal data, whether it is held on paper or on electronic devices. Non-compliance can lead to serious penalties. When another organisation destroys personal data for you, a written contract should set out each party's responsibilities for secure processing. This helps organisations manage risk, protect people's privacy rights and uphold data protection standards.

Fines for the most serious breaches can reach £17.5 million or 4% of annual worldwide turnover, if that is higher.

Individuals can ask for their personal data to be erased, and you normally have one month to respond.

Personal data should not be kept for longer than you need it, and should then be destroyed securely.

There must be a written contract with any data processors you use.

You should be able to show how personal data is handled at every step, including destruction.
